Marketing Analytics

Case 2 Project

Forte Executive Innes

What is the Case About?

Forte, an established European hotel brand, is launching a new mid-priced hotel chain in the U.S. aimed at business travelers. The objective is to select the best hotel concept to win market share and maximize revenue in the State College area.

What We Did?

Ran a conjoint analysis using preference data from 40 business travelers, comparing four hotel concepts (Professional 1, Professional 2, Tourist, and Deluxe)

The analysis used the first-choice decision rule to predict market share.

FORTE - RESULTS AND DECISION

The "Tourist" hotel concept achieved the highest weighted revenue (\$12.6/customer) and tied for highest predicted market share (12.5%).

Key features: Large room, speaker phone, exercise room + pool, tape library, no restaurant delivery.
Recommendation: Launch the "Tourist" concept at State College for optimal profitability and customer appeal.

Predicted market shares and revenue

	Courtyard by Marriott	Nittany Lion Inn	Atherton Hilton	Toftrees	Scanticon	New product	Revenue per unit	Weighted revenue
Base predictions	17.5%	10.0%	6.3%	32.5%	33.8%	N/A	N/A	N/A
...with Professional 1	15.0%	10.0%	5.0%	27.5%	30.0%	12.5%	\$ 99.5	\$ 12.4
...with Professional 2	12.5%	10.0%	6.3%	32.5%	28.8%	10.0%	\$ 100.5	\$ 10.1
...with Tourist	15.0%	7.5%	5.0%	27.5%	32.5%	12.5%	\$ 100.5	\$ 12.6
...with Deluxe	15.0%	7.5%	5.0%	32.5%	30.0%	10.0%	\$ 98.5	\$ 9.9

Simulation results. Predicted market shares, revenue per unit, and weighted revenue (i.e., revenue per unit multiplied by predicted market shares) for each new product.

Case 2 Project

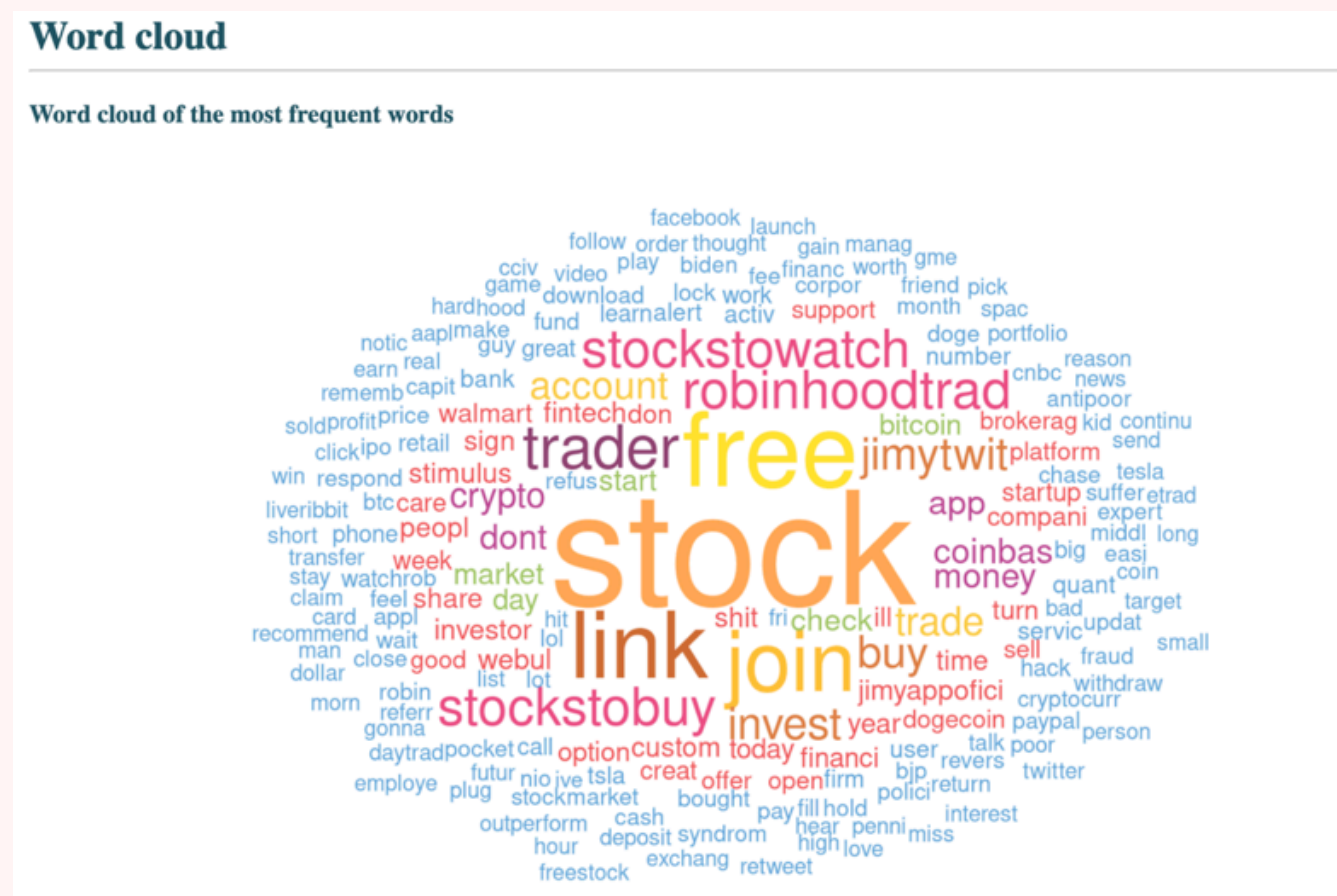

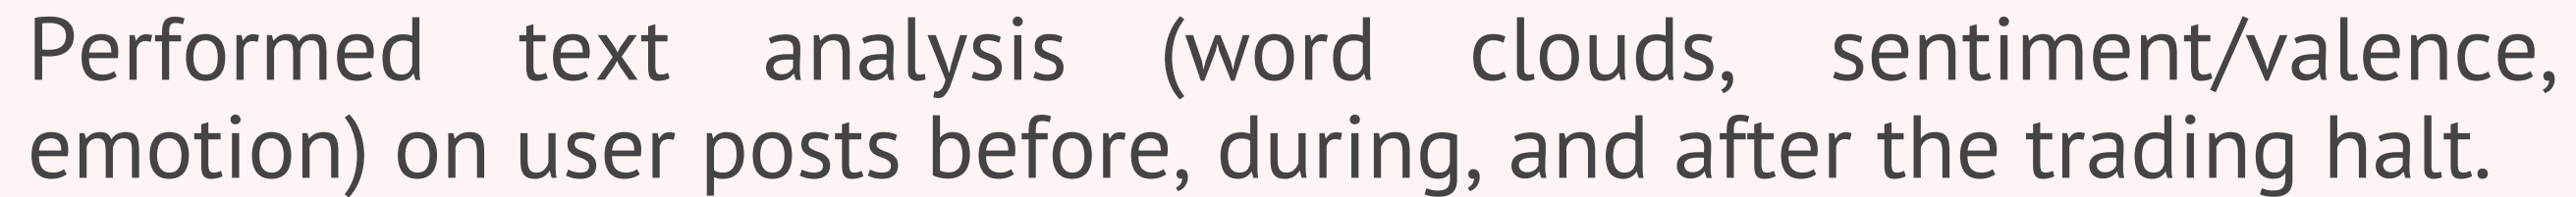

Robinhood Analysis

What is the Case About?

Robinhood, a trading app, faced a reputational crisis during the GameStop trading halt. The goal was to analyze changes in customer sentiment and communication across this event.

ROBINHOOD - KEY FINDINGS

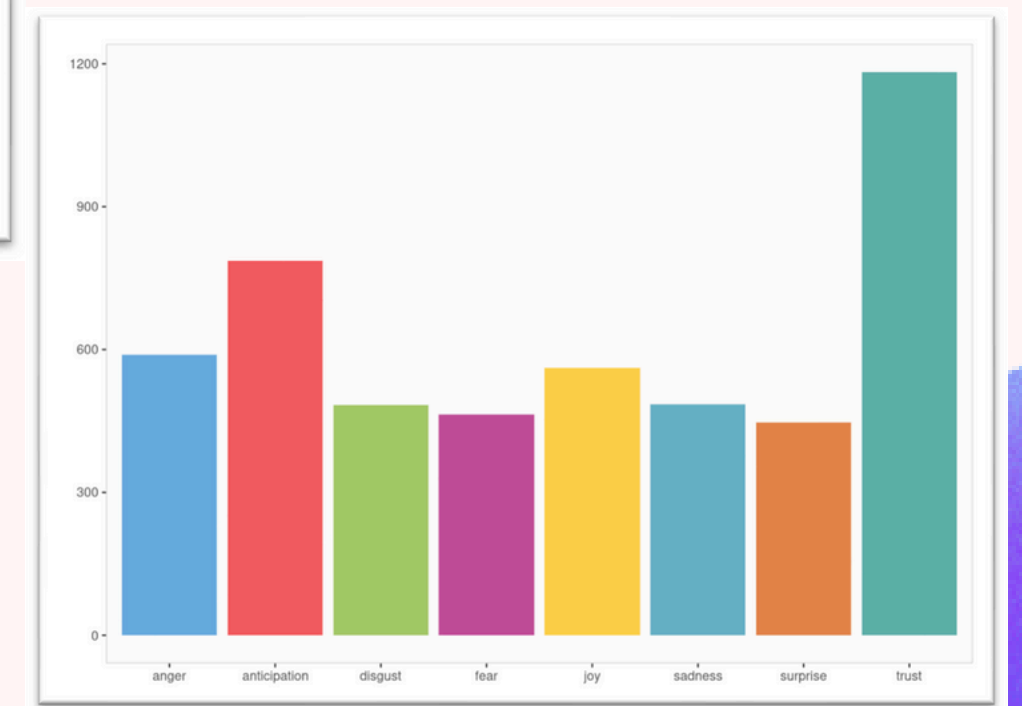

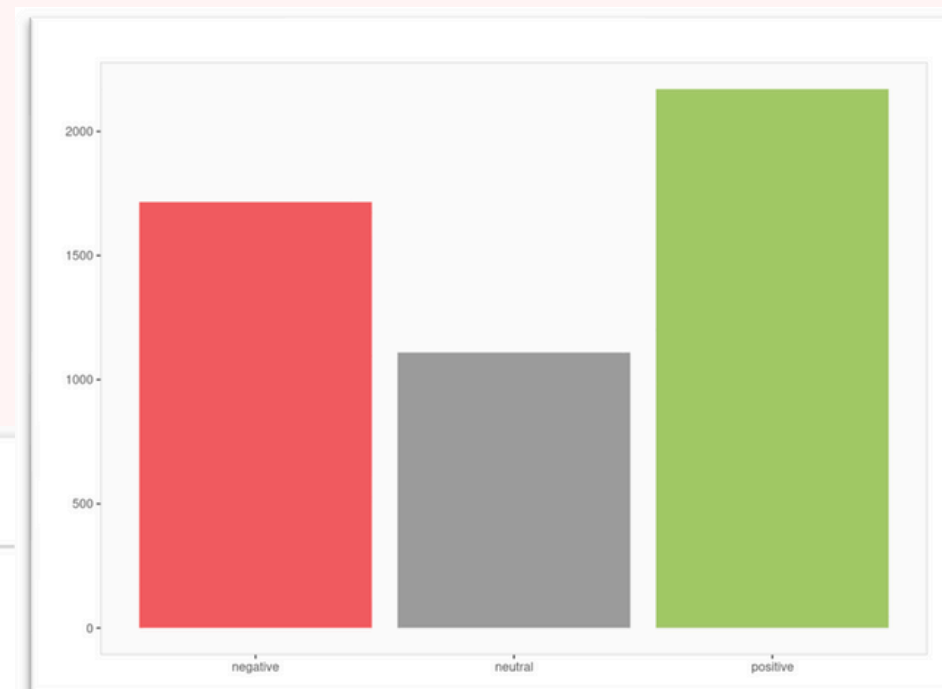

- Word clouds showed topics shifting from general trading ("stock," "free," "join") to controversy focus ("gamestop," "restrict," "suspend") during the event, and then a post-event turn toward crypto ("dogecoin").
- Sentiment (valence) analysis revealed positive sentiment dropped from 58% before the crisis to 31% during, while negative sentiment doubled from 18% to 50% before rebounding partially after.
- Emotion analysis showed trust and anticipation declined during the event, with anger and fear rising sharply, then trust partially rebounded after.

Valence analysis

Valence repartition

	Posts count	Relative posts count
Total	4 998	100%
negative	877	18%
neutral	1 216	24%
positive	2 905	58%

Valence repartition. The number of posts that fall into different valence categories summarized by their absolute and relative values.

Conclusion & Recommendations

Best product for Forte:

“Tourist” concept delivers the best market and financial outcome, balancing appeal and cost.

Text analysis impact for Robinhood:

Real-time social media analysis identified reputational shifts, public frustration, and later recovery efforts insights crucial for communication strategy.

Next steps:

Forte should implement “Tourist” and monitor guest feedback for ongoing refinement.

Robinhood and similar platforms should regularly monitor sentiment, act quickly in public crises, and use emotion trends to guide their communications and service responses.

Thank You!
